

Diagrammatic equation showing the exchange of two particles in a four-particle interaction:

Left side: A diagram with four external legs labeled 1, 2, 3, and 4. Internal red lines connect legs 3 and 4 to a central vertex, and legs 1 and 2 to another central vertex. A dashed blue line labeled P connects the two central vertices.

Equation:
$$= \int_0^\infty dP' \mathbb{F}_{P,P'} \begin{bmatrix} P_3 & P_2 \\ P_4 & P_1 \end{bmatrix}$$

Right side: A diagram with four external legs labeled 1, 2, 3, and 4. Internal red lines connect legs 3 and 4 to a central vertex, and legs 1 and 2 to another central vertex. A dashed blue line labeled P' connects the two central vertices.
